## DETAILED ACTION

### Location of Application

1. The location of the subject application has changed. The subject application is now located in Group 1630, Art Unit 1637, and is assigned to Patent Examiner Jeffrey Siew.

### *Election/Restrictions*

2. Applicant is guided to **MPEP 811** for restrictions before Final restriction practice.

#### **811 Time for Making Requirement**

37 CFR 1.142(a), second sentence states: "[i]f the distinctness and independence of the invention be clear, such requirement will be made before any action upon the merits; however, it may be made at any time before final action in the case at the discretion of the examiner." This means the examiner should make a proper requirement as early as possible in the prosecution, in the first action if possible, otherwise, as soon as the need for a proper requirement develops.

Before making a restriction requirement after the first action on the merits, the examiner will consider whether there will be a serious burden if restriction is not required.

Upon further review of the prosecution, a restriction requirement is deemed required as stated below to provide proper examination of the claims.

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-10,13-19,21-32,34-40 drawn to method of forming a recombinant nucleic acid, classified in class 435, subclass 6.
  - II. Claims 11,12, drawn to cell , classified in class 435, subclass 325.

Art Unit: 1637

- III. Claims 20,33 56-64, drawn to composition and kit, classified in class 536, subclass 22.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II & III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the products may be made in a plurality of different recombinant methods including ligation and adaptors.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the cells are a different biological entity with complex systems and contain a plurality of different materials such as proteins, lipids and complex organelles than the simple nucleic acid products.

Because these inventions are distinct for the reasons given above and the search required for each Group is not required for the other Groups, restriction for examination purposes as indicated is proper.

A telephone call was attempted to Mr. Richard Imbra on 1/11/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 1637

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
